# Asset Management Solution Datasheet

Asset Management is a system that ensures the efficient use of business equipment. The management of physical assets (their selection, maintenance, inspection and renewal) plays a key role in determining the operational performance and profitability of organisations that operate assets as part of their core business.

QMSrs Asset Management Solutions deliver complete end to end asset management methodology and tools in a turnkey package with optional service offerings.

Our products are intuitive, enterprise asset management software systems that automate management of assets to reduce operational costs and improve return on capital.

With QMSrs Asset Management Tools, you can:

- Record & List your Assets.
- Check-in and check-out Assets.
- Scan-in and Scan-out Assets.
- Automatically calculate asset depreciation.
- Track assets Globally.
- Electronic Reporting on all aspects of Assets.
- Manage Your Software and Hardware including License Management.
- Manage your Electrical Safety Testing
- Manage Equipment Calibration
- Manage Maintenance Schedules
- Instant email notification of any actions or movements
- Produce Instant Standard off the Shelf graphical reports
- Produce Instant reports that are exportable to MS tools

Our Asset Management tool delivers complete end-to-end asset management methodology to automate inventory and management of assets to lower operational costs and improve return on capital. All relevant asset details can be recorded including; manufacturer, supplier, location of asset, calibration, maintenance and electrical safety tests.

Comprehensive reports are provided showing the assets in several different categories. Critical data such as calibrations, electrical testing and maintenance schedules are automatically flagged up to highlight before they fall due.

The process, work instructions and templates for managing Assets are provided within the module.

Value Add to Customers

The module offers a powerful tool for managing and controlling all assets within your organisation.

- Manage and control all your assets to satisfy any certification standard such as Quality Management Systems (ISO9001), Health & Safety, and Environmental Management System (ISO14001) and many more.
- Plan advance all maintenance and calibration schedules.
- Track and monitor assets with the organisation by assigning them to individuals within departments for responsibility.
- Improved asset visibility.

- Immediate access to full set of reports saving significant time and cost.

Features of the Asset Management Module

The module is feature rich and includes the follow functions.

- Easy and simple access to all the features.
- Notification – instant electronic notification of pending calibrations, maintenance or electrical safety tests.
- Advanced Search – to find the asset immediately.
- Comprehensive set of reports.
- Printing – reports can be printed, exported to excel, PDF or Image.
- Permission level – access to this module can be individually controlled.
- Communication channel for discussion or sharing of information.
- Process – in-built flow chart to explain the methodology used within this module.
- User guides – work instructions built-in to the Process to help users use the system.

Asset management is available as a standalone module or part of a fully integrated Quality Management System.
